Introduction

FPT Polytechnic

Mission

- Matching with students' learning capabilities
- Satisfy enterprise's human resource demands
- Provide standardized education programs

FPT Polytechnic

Employability of graduates

- FPT Polytechnic graduates have a well-rounded skill set, capable of handling work that integrates knowledge across several disciplines. The educational program is regularly updated to meet international standards, putting special emphasis on language skills, teamwork skills and personal skills that ensure the graduates will have the best employment opportunities at FPT Corporation and other leading enterprises.
- FPT Polytechnic also assists students with job placement. In fact, **many FPT Polytechnic students find employment in their career field of choice even before they complete the second year of the program.**

Values

Quality

FPT training programs comply with ISO standards. FPT Polytechnic focuses on training communications skills, IT skills and English to prepare graduates not just for technical skills but for all aspects of the work environment. Quality is designed into everything from the choice of textbooks to the interior design of the school buildings.

Helping students choose the right path

Helping students choose the right path for their careers is as important as the curriculum we teach. Before selecting their major field of study, all students begin their first semester with the same core curriculum which lays a foundation for further study while giving them an overview of the various disciplines we offer so that they can make an informed decision about what they want to study later on.

Project-based training

Project-based training is an instructional method in which students learn by working on realistic projects that closely resemble real-world work assignments. In Project-based training, students go through an extended process of inquiry in response to a complex question, problem, or challenge and they create a unique product at the end of every semester. Students learn to give and receive feedback in order to improve the quality of the products they create, and are asked to think about what and how they are learning. As a result, **two years of study at FPT Polytechnic is roughly equivalent to two years of work experience.**

Blended Learning

Blended learning is a new educational model with great potential to increase student outcomes and create exciting new roles for teachers. Students have to study online lecturers before going to class. In class, lecturers deliver activities and games to review, concise and apply theories and concepts. The students are centered in class and the lecturer inspire and motivate students to study and explore lessons.

Extended Opportunities

The FPT Polytechnic program is designed to provide opportunities for the largest possible number of students.

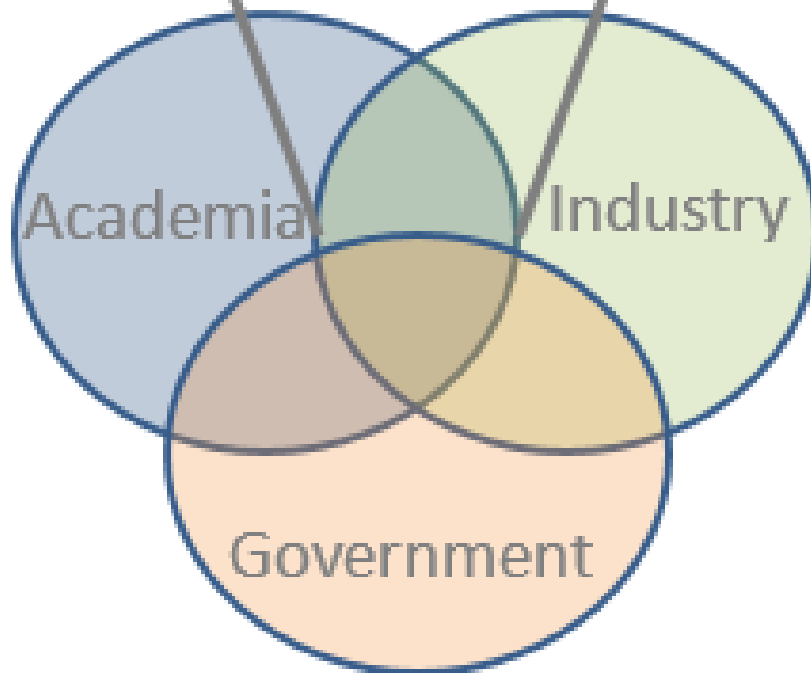

- There are no entrance exams.
- We have small, local training centers in every region of the country.
- The level of education is tailored to the capacity of the majority of students.
- FPT makes special efforts to give students a fair placement when transferring credits to and from other schools; making the program as flexible as possible.

TRIPLE HELIX: WHAT THE LINKS NEED?

Increased
innovation

FPT Polytechnic can provide:

- Professional development courses for industry
- Courses and programs according to industrial needs for human resources

Industry should provide:

- Practical places for students from vocational colleges
- Discussion about the need for human resource that fits the demand of the industry

Government:

- Create tools for communication between school and industry
- Allow open and international standard curriculum in vocational training
- Open zone for vocational training practices in which students can come and work as a worker during time at colleges

Government:

- Support private vocational colleges on international relationship, teacher training, curriculum development
- Provide private vocational colleges career orientation information officially => training orientation

Thank you
